

## Introduction

Stardock CursorFX is a program that lets you use and create incredibly cool looking Windows mouse cursors.

It does this by taking advantage of the new visual effects features of Windows XP and Windows Vista.

CursorFX users can create and use cursors that look and feel far superior to anything you've ever seen before! Best of all, it's really easy to create your own super-charged cursors! It integrates into the standard Mouse interface of Windows and is easy to turn on and off as you need.

CursorFX is a replacement for Stardock's immensely popular cursor skinning program called CursorXP.

## Easy Application

CursorFX comes with an easy to use interface. Simply choose the cursor you want and hit apply.

At any time, you can revert to the standard mouse cursor by hitting ctrl-shift-c.

## Effects

CursorFX can assign a multitude of effects for mouse events that can provide useful feedback and some visual flavor to your PC.

## Settings

Users have a great deal of control over how the mouse cursor is displayed. The color, opacity and size can easily be adjusted on the fly. Even the shadows can be modified including dynamic shadows that allow users to set light sourcing onto cursors.

## Movement Smoothness

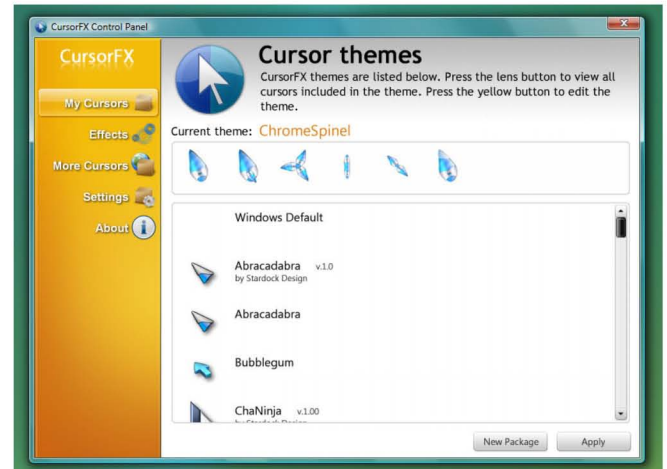

One of the coolest features of CursorFX is movement smoothness. Movement smoothness takes advantage of modern hardware to give cursors an adjustable amount of inertia. It's a feature found commonly in PC games that makes precise mouse control easier. Some might argue that if CursorFX did nothing visual but simply did this that it would be worth using just for this feature alone.

## System Requirements

- WindowsXP (32 bit) or Vista (32 bit)
- 100 MB free drive space
- 512 MB RAM

Vista Ready

## Features

- Cursors with unlimited size
- Fully anti-aliased cursor
- Fully 32-bit alpha blended cursors
- Animations and scripts
- Cursors with normal and pressed states
- Full featured theme editor
- Full featured graphic control panel
- Fully configurable soft shadow
- New Visual Editor
- New User interface
- New theme format: proprietary, expandable that lets skimmers bundle Special effects into themes.
