Power

- Most organizations have users computing with a desktop and a laptop.
- Many documents and information are stored on each machine, thus causing a productivity issue when attempting to complete a task.
- Multiplicity can give the user the ability to use both computers to copy and paste files, text, and images to complete any given task.
- Manage multiple servers from one desk without the need for additional hardware switch. Leverage older computers that still have processing power by conveniently accessing them with Multiplicity.

Control

- The technology provides corporations a unique ability to manage up to 7 computers as if they were one by leveraging only one mouse and one keyboard.
- Move seamlessly from one screen to the other as the mouse is directed by the user.

Simplicity

- Intuitive set-up wizard walks you through the process in minutes. Find directions to be clear and easy.

Flexibility

- Multiplicity's technology can use any TCP/IP network connection that can include wireless, LAN or firewall.

Productivity

- Having multiple computers to manage that all have their own monitor and key board can be cumbersome and require additional space.
- Stardock's Multiplicity and Multiplicity Pro can restore lost productivity and give users the ability to manage all computers from one spot, reducing clutter and space.
