

Stardock Releases v1.9 Update for Start10, Popular Windows Start Menu Application

Plymouth, MI. – April 07, 2020 – Stardock released the v1.9 update of Start10, an easy-to-use program that returns the Windows 10 start menu to a more familiar look and feel, today. With Start10, users can return to the style of the most functional start menu ever made and make it even better with onboard configuration tools.

Users can select the familiar Windows 7 style menu or the Modern design as the foundation of a custom Start menu experience. Changing out colors, applying textures, and setting up filtered searches are just a few ways that *Start10* blends the best of what users are looking for when launching their favorite applications. People who use Stardock's award-winning desktop software, Fences, can enjoy that same organization right from within the Start menu.

“No one wants to spend a long time searching for things on their desktop,” said Brad Wardell, CEO of Stardock. “Start10 makes it easy to establish search filters and navigate your apps. This new update improves the interaction with the Windows 10 search bar, enhances performance, and improves compatibility with another one of our popular apps, WindowBlinds.”

v1.9 also includes jumplist support, updated French and Dutch translations, and more.

Start10 is \$4.99 and is available through [Stardock](#) or on [Steam](#). See a video of Start10 in action [here](#), and learn more about the update on the forums.
